

Universal Standard CV Boot Kit (Stretch Fit)

The cut to size design on the 37660 enables it to fit most cars which in turn reduces the amount of CV boots that are needed to be stocked. As well as this the design of the boot allows for superior flexibility which minimalises wear and tear especially when the vehicle is on full lock. Can be fitted to trilobal/tripod joints, follow the simple step by step instructions found printed in the box. Can be fitted using the conventional cone method Laser Part No 2971 or using our innovative tool Laser Part No 4806 air driven gun.
